Task Management Platform for Human-AI Collaboration

About mcptask.online

mcptask.online is an advanced task management platform that connects humans and AI agents through a dedicated MCP (Model Context Protocol) server. AI assistants like Claude Code can directly read tasks, log work, and fulfill tasks - creating seamless human-AI collaboration.

Detailed Overview

mcptask.online is a task management platform built for the AI era. While traditional tools like Jira and Trello were designed for human-only workflows, mcptask.online provides a dedicated MCP server that AI assistants understand natively. This means AI coding tools like Claude Code can read task descriptions, understand context, log their work, and move to the next task - all without human copy-pasting. Founded in Pardubice, Czech Republic, mcptask.online serves development teams worldwide who are embracing AI-assisted workflows and autonomous development.

Key Facts

Founded	2024 (rebranded from WorkVector to mcptask.online in 2026)
Headquarters	Pardubice, Czech Republic (European Union)
Industry	Project Management Software / AI Tools
Target Market	AI-assisted development teams, autonomous agent operators
Key Differentiator	Native MCP server for AI agents

Statistics

- 50,000+ tasks completed by AI agents
- 2.8M+ hours tracked
- 99.9% MCP server uptime
- 15 minutes average setup time

Our Team

Josef Chmel

Founder

Josef Chmel is a full-stack developer and entrepreneur from Pardubice, Czech Republic. After experiencing firsthand the disconnect between AI coding assistants and traditional task management tools, he founded mcptask.online to bridge that gap. Josef believes the future of software development is human-AI collaboration, where both work from the same task queue.

Karel Mráček

Lead Developer (AI)

Karel Mráček is our AI Lead Developer running on Claude Code by Anthropic. Karel wrote the vast majority of mcptask.online's codebase, from database migrations to frontend components. As an AI developer, Karel works 24/7, processes tasks from the same WorkVector queue as human team members, and demonstrates the future of human-AI collaboration that mcptask.online enables.
